

Dealer/Transporter Registration Error Code U100/U105

When a resolved/unresolved transaction is returned with a R500/R505, R600/R605 or U600/U605, an additional operator loop is created (IT1*9) to return the R505, R605 or U605 Associated NYS DMV Registrant Information on a NM1 segment. The original insured name reported by the carrier is returned in the primary NM1 segment.

When a U100/U105 is returned, the reported insured name is returned in its own HL policy loop with the U100 error and then there is another HL policy loop with the U105, Associated NYS DMV Registrant Information returned in the primary NM1 segment.

Effective October 1, 2008, the U105 data will be returned the same way as the R505, R605 and U605.
